

PEUGEOT 403

OIL FILTER ADAPTOR FITTING INSTRUCTIONS

Please read all the instructions before starting work on your car.

The kit contains:

- Bolt 8mm
- Fibre washer
- Small rubber o-ring
- Aluminum adaptor plate
- Flat seal
- 948 adaptor bolt
- Extension tube nut
- Oil filter

This diagram is for illustration purposes only)

Remove the bowl and filter from the filter head. Remove the stud (which locates the bowl) from the filter head - you may have to do this with the filter head off the car. Clean the filter head and ensure that all old seals and washers have been removed.

Place the 8mm bolt and washer (supplied) through the top of the filter head. Place the small o-ring in the groove in the centre of the filter adaptor plate; place the flat seal on the outer lip of the adaptor plate (you may use grease to hold it in place). Insert the special adaptor bolt with its extension up through the filter adaptor plate (with both seals in the upper face) and place in position on the filter housing, making sure that the seals are in place. Screw the two bolts together until the plate is held firmly in - but do not overtighten. The use of Loctite is recommended.

You are now ready to fit a spin-on filter. We recommend a Crosland 2022 or similar filter. Remember to fill the canister with oil and to grease the canister seal.
